Business Requirement of the Complaint Management and Tracking System for Contact Centre

1. Background

The Contact Centre currently receives customer complaints from multiple sources, including TRC, Chairman's Office, CEO's Office, CXX and Top Management, CRC, CQMS, and other channels. These complaints cover a wide range of issues such as Contact Centre Officer performance, billing matters, fault reporting, telesales activities, VAS, and other service related concerns.

At present, complaints are managed using an Excel spreadsheet. While functional, this approach has become increasingly inefficient due to the large volume of complaints, difficulty in tracking, and challenges in generating timely reports.

2. Objectives

- Establish a system to manage complaints efficiently.
- Enable streamlined complaint handling, tracking, reporting, and analysis.
- Improve transparency and accountability in complaint resolution.
- Enhance staff performance through insights that support targeted training and coaching.

3. Scope

The proposed solution will cover:

- Complaint intake from multiple sources (emails, internal escalations, etc.).
- Categorization and assignment of complaints to relevant teams.
- Tracking complaint status from initiation to resolution.
- Automated reporting and dashboards for management.
- Integration of findings into staff training and coaching programs.

4. Requirements

- Complaint Registration: Ability to log complaints from various sources.
- Categorization: Classify complaints by type (billing, faults, telesales, etc.).
- Assignment: Route complaints to the appropriate team or officer.
- Tracking: Monitor complaint progress with status updates.
- Resolution Feedback: Record recommendations and resolutions provided.

- Reporting: Generate weekly/monthly reports, including complaint trends and resolution timelines.
- Analytics: Provide insights to identify recurring issues and training needs.

5. Benefits

- Reduced manual effort and time spent on complaint management.
- Faster resolution of customer complaints.
- Improved reporting accuracy and timeliness.
- Better staff performance via targeted training based on complaint analysis.

6. Implementation Considerations

- Migration of existing complaint records from Excel.
- Ongoing support and system maintenance.
